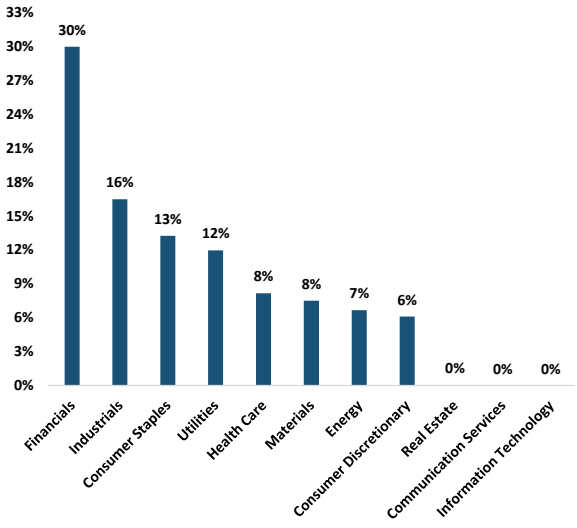
Themes



In October, global markets remained sensitive to energy security, inflation and the rising cost of financing, as tensions around Iran and renewed disruption risks in the Middle East sustained pressure across asset classes. Brent remained well above 100$ all month, while the US 10-year Treasury yield fluctuated around 5% after a strong move lower. Equities experienced sharp rotations rather than a uniform retreat: technology shares sold off while health care and staples were stronger. Region dispersions were clear, Europe and Switzerland had positive performances while US was negative. In this context, the MSCI World declined by -0.75%, the S&P 500 lost -0.87%, while the STOXX 600 increased by +1.98% and the SPI increased by about +6.30%. The Nasdaq-100 decreased by -6.63%. Gold retreated by -6.80% in dollars, while Brent advanced by approximately +13.63%. The Bund 10Y yield decreased from 3.59 to around 3.32% and the US 10Y decreased from 5.28% to 4.92%. Our certificate delivered a performance of +3.37% over the period.

This month marked a transition from renewed tightening to a more cautious policy pause. The Federal Reserve left its target range unchanged at 3.75%–4.00%, with two dissenting votes highlighting continued disagreement over the inflation outlook. The ECB also maintained its deposit rate at 2.50%, leaving investors focused on the persistence of energy-driven price pressures and the scope for further action. Institutional uncertainty increased when Christine Lagarde announced that she would step down as ECB President on 7 February 2027, ahead of the scheduled end of her mandate. Her departure opens a succession process at a sensitive moment for European fiscal policy and monetary credibility, adding another consideration to an already difficult policy environment. Protests and unrest in Europe made the headlines too. Fixed income and credit markets continued to distinguish between sovereign resilience, fiscal vulnerability and capital-intensive growth. French borrowing costs remained under pressure, with the 10-year OAT yield briefly reaching approximately 5.14% at its peak. In AI infrastructure, the debate moved further from the size of contracted demand towards the funding required to deliver it. Some brokers highlighted the fact that CoreWeave still needed to raise $76 billion to fulfil its committed backlog, alongside differences between financing maturities and underlying customer-contract durations. These concerns do not invalidate demand for computing capacity, but they make borrowing costs, collateral, refinancing and cash conversion increasingly important determinants and having clear impacts on CDS and spreads.

At the micro level, October reinforced the distinction between strong operating demand and the financial burden of expansion. Investors scrutinized Hyperscalers spending, infrastructure partnerships and the extent to which new financing arrangements distribute or merely relocate risk. Technology sector was under pressure all month and particularly on the last week, due to Capex needs guidance and negative free-cash flows, illustrated by Alphabet, Amazon, Intel and Meta. AI demand is not the problem, capacity and the cost of delivering it are. Outside technology, the earnings season provided evidence of selective resilience: DNB delivered a 14.5% return on equity and maintained strong capital buffers, while Novartis reported 4% sales growth at constant exchange rates and $5.1 billion of quarterly free cash flow. Moving to other parts of the World, Brazil introduced a significant political and market catalyst. President Luiz Inácio Lula da Silva won the presidential runoff against Flávio Bolsonaro with approximately 52% of the vote, reversing expectations embedded in some investor positioning. Brazilian equities and the real fell, while bond yields rose as markets reassessed fiscal policy, spending commitments and the relationship between the presidency and Congress. The episode illustrated how quickly a crowded political trade can unwind, with implications extending beyond domestic assets to European companies exposed to Brazilian earnings and currencies.

At the Portfolio level, Communication Services and Materials were the weakest-performing sectors, declining by -10.11% and -8.05% respectively over the month. Conversely, Consumer Staples and Health Care were the strongest positive contributors, raising by +14.59 and +11.77% respectively.

At the stock level, Altria and British American tobacco were our strongest contributors, delivering respective gains of +17.88% and +15.86%. Altria Group and British American Tobacco shares rose due to a broader market rotation into defensive consumer staples, strong third-quarter earnings, and high dividend yields that attracted investors seeking safety amid market volatility. On the downside, Rio Tinto and Unicredit were the main detractors, declining by -11.93% and -11.88%, respectively. UniCredit's aggressive pursuit and regulatory milestones regarding its takeover of Germany's Commerzbank, alongside potential risks like Italian windfall tax discussions, kept investor uncertainty and valuation multiples sensitive. Moreover, UniCredit announced that Chairman Pier Carlo Padoan will step down at the end of his term for personal reasons, initiating a governance transition ahead of early 2027 board renewals. During the month, we sold Rai Way, Elisa and Axa. On the other side we bought BHP, NN Group and Air Liquide. Rai Way and Elisa had deteriorating fundamentals inside the Telecom sector, with somehow increasing debt ratios and less attractive dividend yields. They were reporting declining telecom service revenues, so we decided to exit them. Axa was sold to help mitigate the risk of French regulatory changes in life insurance and exposure to French political risk. BHP is listed in London and has a strong European presence, being a solid leader and player in the global copper market. We decided to increase our exposure to copper, which already appears to have become BHP's main profit driver. The company offers more than 6% dividend yield and as a rock-solid balance sheet. NN Group represents an attractive opportunity in the European financial sector, combining a dividend yield of over 5%, strong capital generation, high solvency, and an explicit dividend growth policy. It provides new exposure to the Netherlands and diversifies the financial pocket. Finally, Air Liquide unveiled its new 2030 strategic plan, titled BEYOND. As part of this plan, the company announced, for the first time in its history, a global share buyback program totaling 4 billion euros, scheduled for the period 2027–2028, starting at the end of this month.

Frontier markets: Within emerging markets, those that are particularly small, new or under-developed.

Emerging markets: Markets of less economically developed nations, such as some nations in Asia, Africa, Eastern Europe and Latin America.

Bonds: Securities that represent an obligation to repay a debt, with interest. Below investment-grade bonds generally pay higher interest rates but are considered less likely to make all scheduled payments.

Convertible bonds: Bonds that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.

Contingent convertible bonds (CoCos): Convertible bonds that offer the potential for high interest and capital gains, in exchange for higher risk of loss.

Convertible debt securities: Debt securities that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.

Asset-backed securities: A type of debt security backed by receivables (such as credit card debt) and typically carrying above-average risk.

Debt securities: Securities that represent an obligation to repay a debt, along with interest.

Equities: Securities that represent a share in the business results of a company.

Derivatives: Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.

Money market instruments: Financial instruments designed to provide stable value, interest and a very low risk of loss, as well as being readily convertible into cash.

Option: Financial instruments that offer the right to buy (call option) or sell (put option) shares at a certain price

Commodities: A category that includes metals, building materials, fuels and food ingredients.

Alpha: Alpha shows the percentage performance of a fund above or below that explained by its exposure to the broader market.

Beta: Beta shows the average extent a fund‘s return moves relative to the broader market. A fund with a beta above 1 moves on average more than the market and below 1 moves on average less than the market.

Cut-off: Deadline for remittance of orders to the transfer agent in Luxembourg as set out in the relevant annexes to the prospectus. You may be required to submit your orders to your financial advisor or fund distributor by an earlier cut-off time.

Correlation and annualised volatility: Correlation shows how a fund‘s return moves in relation to the benchmark. Highly correlated investments tend to move up and down together while this is not true for investments with low correlation. Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.

Standard deviation: Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.

Maximum drawdown: The largest loss measured from peak to trough until a new peak is attained.

Ongoing charges (OCR): Ongoing charges are based over 12 months of expenses ending the 31 December of the previous year. It is annually updated, but may be adjusted more frequently.

Sharpe ratio: The Sharpe ratio shows the fund‘s risk-adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.

Tracking error: The volatility of the fund‘s excess returns over its benchmark returns. It quantifies how closely a manager‘s return pattern follows that of the benchmark.

Derivatives risk: Certain derivatives could increase Sub-Fund volatility or expose the Sub-Fund to losses greater than the cost of the derivative.

Counterparty risk: The Sub-Fund could lose money if an entity with which it does business becomes unwilling or unable to honor its commitments to the Sub-Fund.

Management risk: Portfolio management techniques that have worked well in normal market conditions could prove ineffective or detrimental during unusual conditions.

Credit risk: Prices of a debt security may fall if the issuer's creditworthiness deteriorates, or if investors believe it may do so. This risk tends to be greater with lower quality debt securities. In extreme cases, an issuer's securities could become worthless if it fails to make timely debt service payments.

Operational risk: In any market, but especially in emerging markets, the fund could lose some or all of its money through a failure in asset safekeeping or through fraud, corruption, political actions or any other unexpected events.

Liquidity risk: Certain securities could become hard to value, or to sell at a desired time and price.
