

Weisshorn Funds UCITS – MegaTrends Equity EUR

Marketing communication as of : 31.07.2025

Investment Universe and Investment Objectives

ISIN: LU1812909783

NAV 124.74

The investment objective of the Sub-Fund is to seek long-term capital growth by investing in a portfolio of worldwide equities. The investment selection will be based on a combination of "Top-Down" approach and "Bottom-Up stock picking" selection process. The management team will focus on global megatrends reshaping our world: Technological innovations, Evolving population dynamics, Resource utilization. To achieve its objective, the Sub-Fund will mainly invest in equities and equity related securities (such as depositary receipts) of companies worldwide.

The Weisshorn MegaTrends Equity fund is a long term equity investment vehicle suitable for long term investors (5-year minimum holding horizon). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The essential risks of the investment fund lie in the possibility of depreciation of the securities in which the fund is invested. Other risks materially relevant to the PRIIP not included in the summary risk indicator: Liquidity risks, Counterparty risks, Operational risks, Risks from the use of derivatives. This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment.

The past performance is not an indicator of future returns. The return of the fund may go down as well as up due to changes in rates of exchange between currencies. Future performance is subject to taxation which depends on the personal situation of each investor and which may change in the future.

Although several key deadlines occurred in July, the equity markets remained surprisingly calm. In this context, the S&P 500 rose by 2.24%, the Stoxx 600 gained 0.99%, and our fund posted a monthly return of 1.78%.

During the first week of July, the U.S. Senate passed President Trump's "Big Beautiful Bill". While economists remain divided on the macroeconomic impact of this measure, the President claims that this new budget will help stimulate the country's growth. What is widely agreed upon, however, is that it will lead to an increase in public debt. To finance these new initiatives, the debt ceiling was preemptively raised by \$5 trillion. This announcement pushed yields slightly higher, although the market remains uncertain as to whether this budget will ultimately drive growth and/or inflation.

On July 9th, the tariff truce deadline expired. As anticipated by the "TACO" traders (Trump Always Chickens Out), the administration granted an additional one-month delay to allow more time for negotiations. This resulted in several trade deals, the most significant being those with Japan and the European Union, both now subject to a 15% tariff rate. This "positive" news helped to revive investor sentiment and extend the market rally.

Macroeconomic data confirm that the economy is proving more resilient than expected. Inflation figures remain contained for now, although still above the 2% threshold in the U.S. and labor market data suggest that tariffs have not yet had a meaningful impact on growth, hence no need for workforce reductions. On the microeconomic front, Q2 earnings season has begun. As usual, analysts revised expectations downward ahead of the reporting period, leading to widespread earnings beats. Market valuations remain elevated, but as long as revenue and EPS growth remain intact, these levels appear "justifiable".

At the portfolio level, Semiconductors and Software were our top-performing sectors. Semiconductors advanced by 10.10%, supported by Trump's announcement allowing U.S. companies to continue selling chips to China. Software gained 6.9%, driven by strong earnings reports. Conversely, Cybersecurity and Food stocks weighed on performance. Cybersecurity dropped 10.5%, while food declined by 9.5%. Overly optimistic growth expectations and rich valuations dragged down some Cybersecurity names during earnings releases. For the Food sector, elevated raw material costs and weak forward guidance contributed to the negative performance.

At the individual stock level, AMD and CATL were our top contributors. AMD surged 24.25% following news of renewed chip sales to China. CATL rose 23.4% on the back of strong electric vehicle sales in China. On the downside, Palo Alto and Symrise were the largest detractors, falling 15.1% and 10.8% respectively. Palo Alto dropped sharply on the final day of the month after announcing its \$25 billion acquisition of CyberArk. Symrise also declined toward month-end despite strong margins and bottom-line results, as the company revised its full-year guidance downward amid an uncertain environment.

During the month, we exited our remaining position in Waga and initiated a new position in Nemetschek. This company provides software solutions for designing and constructing buildings and infrastructure. We believe Nemetschek is well-positioned to benefit from the wave of infrastructure investments supported by European government budgets.

For the avoidance of doubt, if you decide to invest, you will be buying units/shares in the Fund and not investing directly in the underlying assets.

Frontier markets: Within emerging markets, those that are particularly small, new or under-developed.	Correlation and annualised volatility: Correlation shows how a fund's return moves in relation to the benchmark. Highly correlated investments tend to move up and down together while this is not true for investments with low correlation. Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.
Emerging markets: Markets of less economically developed nations, such as some nations in Asia, Africa, Eastern Europe and Latin America.	Standard deviation: Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.
Bonds: Securities that represent an obligation to repay a debt, with interest. Below investment-grade bonds generally pay higher interest rates but are considered less likely to make all scheduled payments.	Maximum drawdown: The largest loss measured from peak to trough until a new peak is attained.
Convertible bonds: Bonds that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.	Ongoing charges (OCR): Ongoing charges are based over 12 months of expenses ending the 31 December of the previous year. It is annually updated, but may be adjusted more frequently.
Contingent convertible bonds (CoCos): Convertible bonds that offer the potential for high interest and capital gains, in exchange for higher risk of loss.	Sharpe ratio: The Sharpe ratio shows the fund's risk-adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.
Convertible debt securities: Debt securities that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.	Tracking error: The volatility of the fund's excess returns over its benchmark returns. It quantifies how closely a manager's return pattern follows that of the benchmark.
Asset-backed securities: A type of debt security backed by receivables (such as credit card debt) and typically carrying above-average risk.	Derivatives risk: Certain derivatives could increase Sub-Fund volatility or expose the Sub-Fund to losses greater than the cost of the derivative.
Debt securities: Securities that represent an obligation to repay a debt, along with interest.	Counterparty risk: The Sub-Fund could lose money if an entity with which it does business becomes unwilling or unable to honor its commitments to the Sub-Fund.
Equities: Securities that represent a share in the business results of a company.	Management risk: Portfolio management techniques that have worked well in normal market conditions could prove ineffective or detrimental during unusual conditions.
Derivatives: Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.	Credit risk: Prices of a debt security may fall if the issuer's creditworthiness deteriorates, or if investors believe it may do so. This risk tends to be greater with lower quality debt securities. In extreme cases, an issuer's securities could become worthless if it fails to make timely debt service payments.
Money market instruments: Financial instruments designed to provide stable value, interest and a very low risk of loss, as well as being readily convertible into cash.	Operational risk: In any market, but especially in emerging markets, the fund could lose some or all of its money through a failure in asset safekeeping or through fraud, corruption, political actions or any other unexpected events.
Option: Financial instruments that offer the right to buy (call option) or sell (put option) shares at a certain price	Liquidity risk: Certain securities could become hard to value, or to sell at a desired time and price.
Commodities: A category that includes metals, building materials, fuels and food ingredients.	
Alpha: Alpha shows the percentage performance of a fund above or below that explained by its exposure to the broader market.	
Beta: Beta shows the average extent a fund's return moves relative to the broader market. A fund with a beta above 1 moves on average more than the market and below 1 moves on average less than the market.	
Cut-off: Deadline for remittance of orders to the transfer agent in Luxembourg as set out in the relevant annexes to the prospectus. You may be required to submit your orders to your financial advisor or fund distributor by an earlier cut-off time.
