

Weisshorn Funds UCITS – MegaTrends Equity CHF

Marketing communication as of : 30.09.2025

Investment Universe and Investment Objectives

The investment objective of the Sub-Fund is to seek long-term capital growth by investing in a portfolio of worldwide equities. The investment selection will be based on a combination of "Top-Down" approach and "Bottom-Up stock picking" selection process. The management team will focus on global megatrends reshaping our world: Technological innovations, Evolving population dynamics, Resource utilization. To achieve its objective, the Sub-Fund will mainly invest in equities and equity related securities (such as depositary receipts) of companies worldwide.

The Weisshorn MegaTrends Equity fund is a long term equity investment vehicle suitable for long term investors (5-year minimum holding horizon). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The essential risks of the investment fund lie in the possibility of depreciation of the securities in which the fund is invested. Other risks materially relevant to the PRIIP not included in the summary risk indicator: Liquidity risks, Counterparty risks, Operational risks, Risks from the use of derivatives. This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment.

ISIN: LU1812910369

NAV 118.47

The past performance is not an indicator of future returns. The return of the fund may go down as well as up due to changes in rates of exchange between currencies. Future performance is subject to taxation which depends on the personal situation of each investor and which may change in the future.

In September, financial markets continued to rally around the wave of announced infrastructure investments aimed at supporting artificial intelligence development. The U.S. rate-cutting cycle resumed after a nine-month pause, further fueling market enthusiasm. In this environment, the S&P 500 gained 3.6% over the month, while the Stoxx 600 advanced 1.5%, and our fund rose 2.8%.

On the macroeconomic front, the Federal Reserve meeting was the key event. The Fed's members ultimately decided to cut policy rates by 25 basis points. Chair Powell emphasized that rising risks in the labor market had begun to offset concerns about a potential resurgence of inflation. The Fed thus found itself in a difficult position caught between the risk of slowing employment and that of renewed price pressures.

The strongest market drivers in September, however, were investment announcements in the AI sector. Oracle shook the markets on September 9 with two major announcements. First, the company expects its annual cloud revenues to reach \$144Bn by 2030. Second, it signed a \$300Bn agreement with OpenAI to build data centers over the next five years. Shortly afterward, Nvidia also revealed a \$100Bn investment in OpenAI, part of which is expected to fund the projects undertaken with Oracle. This creates a somewhat circular dynamic in which Nvidia must finance OpenAI so that it can invest with Oracle, which will in turn build data centers equipped with Nvidia chips effectively a form of self-financing. The situation bears some resemblance to the cycles witnessed during the dot-com bubble of the early 2000s. Although the ultimate outcome of these investments remains uncertain, markets have so far interpreted the news positively.

At the portfolio level, Clean Transportation and Semiconductors were the main contributors to performance, posting monthly gains of 14.9% and 13.9%, respectively. Within Clean Transportation, Chinese stocks were the primary performance drivers. In Semiconductors, the sector benefited broadly from the flurry of announcements related to artificial intelligence, which lifted valuations across the board.

Conversely, Food Innovation and Healthcare were the two weakest sectors in September, declining by 26% and 13%, respectively. In the Food segment, our exposure to SIG, which we discuss below, detracted the performance. In Healthcare, uncertainty surrounding the U.S. Government's plans to reduce drug prices weighed on the sector. However, recent agreements between Pfizer and the Government highlighted that the Pharmaceutical industry may not be as adversely affected as the market initially feared, rekindling investor interest in the sector.

At the stock level, CATL and Lam Research delivered the strongest performances in September, rising 34% and 33%, respectively. CATL continues to post robust growth and is gaining market share in other regions, particularly in Europe. For Lam Research, the expected surge in AI-related CAPEX should translate into increased demand for its equipment, providing a strong tailwind for future growth. On the downside, SIG Group and Harmony Biosciences were the main detractors, with declines of 35% and 25%, respectively. SIG's share price correction followed a profit warning, while Harmony's drop was driven by disappointing clinical development results.

During September, we initiated a position in Uber Technologies, which we believe is well positioned to benefit from advances in autonomous driving an opportunity that could support its growth trajectory and improve margins over the long term.

For the avoidance of doubt, if you decide to invest, you will be buying units/shares in the Fund and not investing directly in the underlying assets.

Frontier markets: Within emerging markets, those that are particularly small, new or under-developed.	Correlation and annualised volatility: Correlation shows how a fund's return moves in relation to the benchmark. Highly correlated investments tend to move up and down together while this is not true for investments with low correlation. Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.
Emerging markets: Markets of less economically developed nations, such as some nations in Asia, Africa, Eastern Europe and Latin America.	Standard deviation: Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.
Bonds: Securities that represent an obligation to repay a debt, with interest. Below investment-grade bonds generally pay higher interest rates but are considered less likely to make all scheduled payments.	Maximum drawdown: The largest loss measured from peak to trough until a new peak is attained.
Convertible bonds: Bonds that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.	Ongoing charges (OCR): Ongoing charges are based over 12 months of expenses ending the 31 December of the previous year. It is annually updated, but may be adjusted more frequently.
Contingent convertible bonds (CoCos): Convertible bonds that offer the potential for high interest and capital gains, in exchange for higher risk of loss.	Sharpe ratio: The Sharpe ratio shows the fund's risk-adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.
Convertible debt securities: Debt securities that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.	Tracking error: The volatility of the fund's excess returns over its benchmark returns. It quantifies how closely a manager's return pattern follows that of the benchmark.
Asset-backed securities: A type of debt security backed by receivables (such as credit card debt) and typically carrying above-average risk.	Derivatives risk: Certain derivatives could increase Sub-Fund volatility or expose the Sub-Fund to losses greater than the cost of the derivative.
Debt securities: Securities that represent an obligation to repay a debt, along with interest.	Counterparty risk: The Sub-Fund could lose money if an entity with which it does business becomes unwilling or unable to honor its commitments to the Sub-Fund.
Equities: Securities that represent a share in the business results of a company.	Management risk: Portfolio management techniques that have worked well in normal market conditions could prove ineffective or detrimental during unusual conditions.
Derivatives: Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.	Credit risk: Prices of a debt security may fall if the issuer's creditworthiness deteriorates, or if investors believe it may do so. This risk tends to be greater with lower quality debt securities. In extreme cases, an issuer's securities could become worthless if it fails to make timely debt service payments.
Money market instruments: Financial instruments designed to provide stable value, interest and a very low risk of loss, as well as being readily convertible into cash.	Operational risk: In any market, but especially in emerging markets, the fund could lose some or all of its money through a failure in asset safekeeping or through fraud, corruption, political actions or any other unexpected events.
Option: Financial instruments that offer the right to buy (call option) or sell (put option) shares at a certain price	Liquidity risk: Certain securities could become hard to value, or to sell at a desired time and price.
Commodities: A category that includes metals, building materials, fuels and food ingredients.	
Alpha: Alpha shows the percentage performance of a fund above or below that explained by its exposure to the broader market.	
Beta: Beta shows the average extent a fund's return moves relative to the broader market. A fund with a beta above 1 moves on average more than the market and below 1 moves on average less than the market.	
Cut-off: Deadline for remittance of orders to the transfer agent in Luxembourg as set out in the relevant annexes to the prospectus. You may be required to submit your orders to your financial advisor or fund distributor by an earlier cut-off time.
