

Weisshorn Funds UCITS – MegaTrends Equity EUR

Marketing communication as of : 31.10.2025

Investment Universe and Investment Objectives

ISIN: LU1812909783

NAV 132.97

The investment objective of the Sub-Fund is to seek long-term capital growth by investing in a portfolio of worldwide equities. The investment selection will be based on a combination of "Top-Down" approach and "Bottom-Up stock picking" selection process. The management team will focus on global megatrends reshaping our world: Technological innovations, Evolving population dynamics, Resource utilization. To achieve its objective, the Sub-Fund will mainly invest in equities and equity related securities (such as depositary receipts) of companies worldwide.

The Weisshorn MegaTrends Equity fund is a long term equity investment vehicle suitable for long term investors (5-year minimum holding horizon). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The essential risks of the investment fund lie in the possibility of depreciation of the securities in which the fund is invested. Other risks materially relevant to the PRIIP not included in the summary risk indicator: Liquidity risks, Counterparty risks, Operational risks, Risks from the use of derivatives. This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment.

The past performance is not an indicator of future returns. The return of the fund may go down as well as up due to changes in rates of exchange between currencies. Future performance is subject to taxation which depends on the personal situation of each investor and which may change in the future.

October was a month rich in events. On one hand, the U.S. government shutdown and seems on track to set new records. On the other hand, the third-quarter earnings season began, and so far, company results have been supportive for markets. In this environment, equities held up well, driven by the “TACO trade”, the S&P 500 gained 2.34%, the Stoxx 600 in Europe advanced 2.59%, and our fund rose 3.53%.

Since early October, the U.S. government has been closed, as Republicans and Democrats have yet to reach an agreement on the federal budget. For now, investors remain relatively calm about the potential economic impact. Because of the shutdown, most government-produced statistics were not released during the month, except for inflation data, which has continued to rise since April and now stands at 3%. As a result, the Federal Reserve’s meeting took place with limited macroeconomic information, forcing it to rely on private-sector data. The Fed decided to cut rates again by 25 basis points but adopted a more hawkish tone than the market expected. Indeed, persistent inflation concerns could lead the Fed to pause at its next meeting.

Internationally, tensions flared between China and the United States on October 9, when Beijing reintroduced strict export controls on rare earths. This move turned out to be a political maneuver aimed at strengthening President Xi Jinping’s negotiating position ahead of his meeting with President Trump. During his trip to Asia later in the month, the U.S. president signed several agreements with Japan, South Korea, and, most importantly, China. The U.S. agreed to reduce certain tariffs on Chinese goods, while China suspended the implementation of its rare-earth export restrictions. This truce should only be temporary as nothing has been signed.

On the corporate side, earnings releases continued to support equity markets. The enthusiasm surrounding artificial intelligence remains strong, with the deals announced between OpenAI and major cloud providers further fueling optimism toward the sector, even as a growing number of analysts question when tangible returns on these investments will materialize.

In October, our strongest contributors were the Semiconductors and Clean Energy sectors, which advanced 20.1% and 14.7%, respectively. The rally in Semiconductors was driven by a 60% surge in AMD, following the announcement of its partnership with OpenAI and further gains after IBM revealed plans to use AMD chips in its quantum computers. In Clean Energy, our solar exposure supported returns, as the sector benefited from growing expectations of rising electricity demand from data centers and solid results from leading names such as First Solar and Nextrackr.

Conversely, Food (–8.3%) and Clean Transportation (–7.2%) were the weakest sectors. Within Food, Lindsay detracted from performance after reporting softer growth and margin pressure. In Clean Transportation, sales from our Chinese electric vehicle holdings came in below expectations, weighing on sector returns.

At the stock level, AMD and Cameco were the main positive contributors. Cameco gained 24% after the U.S. government announced plans to build new nuclear reactors with Westinghouse, its subsidiary, and to establish strategic uranium reserves—moves that supported uranium prices and the broader nuclear value chain. Lindsay and Li Auto were the two largest detractors for the reasons mentioned above.

During the month, we initiated a position in Lindsay, a U.S. company specializing in irrigation systems for agriculture. While growth remains modest, the company’s valuation is attractive, and its technology aligns with the long-term structural trend of sustainable water management. In addition, agricultural investment cycles typically accelerate as the Federal Reserve lowers rates. With the Fed resuming its easing cycle, we believe Lindsay’s growth prospects should improve.

Clients are urged to be assisted by professionals to assess the possibilities and risks associated with any financial operation before making any investment or other decisions. For the avoidance of doubt, if you decide to invest, you will be buying units/shares in the Fund and not investing directly in the underlying assets.

Frontier markets: Within emerging markets, those that are particularly small, new or under-developed.	Correlation and annualised volatility: Correlation shows how a fund's return moves in relation to the benchmark. Highly correlated investments tend to move up and down together while this is not true for investments with low correlation. Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.
Emerging markets: Markets of less economically developed nations, such as some nations in Asia, Africa, Eastern Europe and Latin America.	Standard deviation: Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.
Bonds: Securities that represent an obligation to repay a debt, with interest. Below investment-grade bonds generally pay higher interest rates but are considered less likely to make all scheduled payments.	Maximum drawdown: The largest loss measured from peak to trough until a new peak is attained.
Convertible bonds: Bonds that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.	Ongoing charges (OCR): Ongoing charges are based over 12 months of expenses ending the 31 December of the previous year. It is annually updated, but may be adjusted more frequently.
Contingent convertible bonds (CoCos): Convertible bonds that offer the potential for high interest and capital gains, in exchange for higher risk of loss.	Sharpe ratio: The Sharpe ratio shows the fund's risk-adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.
Convertible debt securities: Debt securities that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.	Tracking error: The volatility of the fund's excess returns over its benchmark returns. It quantifies how closely a manager's return pattern follows that of the benchmark.
Asset-backed securities: A type of debt security backed by receivables (such as credit card debt) and typically carrying above-average risk.	Derivatives risk: Certain derivatives could increase Sub-Fund volatility or expose the Sub-Fund to losses greater than the cost of the derivative.
Debt securities: Securities that represent an obligation to repay a debt, along with interest.	Counterparty risk: The Sub-Fund could lose money if an entity with which it does business becomes unwilling or unable to honor its commitments to the Sub-Fund.
Equities: Securities that represent a share in the business results of a company.	Management risk: Portfolio management techniques that have worked well in normal market conditions could prove ineffective or detrimental during unusual conditions.
Derivatives: Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.	Credit risk: Prices of a debt security may fall if the issuer's creditworthiness deteriorates, or if investors believe it may do so. This risk tends to be greater with lower quality debt securities. In extreme cases, an issuer's securities could become worthless if it fails to make timely debt service payments.
Money market instruments: Financial instruments designed to provide stable value, interest and a very low risk of loss, as well as being readily convertible into cash.	Operational risk: In any market, but especially in emerging markets, the fund could lose some or all of its money through a failure in asset safekeeping or through fraud, corruption, political actions or any other unexpected events.
Option: Financial instruments that offer the right to buy (call option) or sell (put option) shares at a certain price	Liquidity risk: Certain securities could become hard to value, or to sell at a desired time and price.
Commodities: A category that includes metals, building materials, fuels and food ingredients.	
Alpha: Alpha shows the percentage performance of a fund above or below that explained by its exposure to the broader market.	
Beta: Beta shows the average extent a fund's return moves relative to the broader market. A fund with a beta above 1 moves on average more than the market and below 1 moves on average less than the market.	
Cut-off: Deadline for remittance of orders to the transfer agent in Luxembourg as set out in the relevant annexes to the prospectus. You may be required to submit your orders to your financial advisor or fund distributor by an earlier cut-off time.
