

## Weisshorn Funds UCITS – MegaTrends Equity EUR

Marketing communication as of : 30.11.2025

### Investment Universe and Investment Objectives

ISIN: LU1812909783

NAV 127.27

The investment objective of the Sub-Fund is to seek long-term capital growth by investing in a portfolio of worldwide equities. The investment selection will be based on a combination of “Top-Down” approach and “Bottom-Up stock picking” selection process. The management team will focus on global megatrends reshaping our world: Technological innovations, Evolving population dynamics, Resource utilization. To achieve its objective, the Sub-Fund will mainly invest in equities and equity related securities (such as depositary receipts) of companies worldwide.

The Weisshorn MegaTrends Equity fund is a long term equity investment vehicle suitable for long term investors (5-year minimum holding horizon). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The essential risks of the investment fund lie in the possibility of depreciation of the securities in which the fund is invested. Other risks materially relevant to the PRIIP not included in the summary risk indicator: Liquidity risks, Counterparty risks, Operational risks, Risks from the use of derivatives. This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment.

The past performance is not an indicator of future returns. The return of the fund may go down as well as up due to changes in rates of exchange between currencies. Future performance is subject to taxation which depends on the personal situation of each investor and which may change in the future.

November was defined by uncertainty. The typical positive seasonal trends were upended by the longest US Government shutdown in history and increasing concerns about the profitability of the AI sector. In this environment, equity markets struggled to find direction. Mega-cap Tech stocks underperformed sharply, prompting investors to shift toward defensive sectors. The S&P 500 ended nearly flat, rising just 0.13%, while the Nasdaq 100 declined by 1.64%. In Europe, the Stoxx 600 gained 0.79%, while our fund delivered a performance of -4.29%.

On the AI front, uncertainty remained despite strong earnings from companies like Nvidia. Investors began questioning whether the sector could continue to turn massive debt-financed investments into sustainable profits. Concerns grew over circular financing between Hyperscalers and Chipmakers further dampening enthusiasm for large Tech firms.

Adding to this was the situation at the Federal Reserve, which faced one of the toughest information vacuums for a long time. The Government shutdown delayed the release of key economic data, leaving policymakers to rely on incomplete private-sector indicators. This uncertainty heightened ahead of the December FOMC meeting, where expectations for a 25bps rate cut surged above 80%.

Geopolitics also offered a potential turning point. The US presented a 28-points peace plan to Ukraine, involving neutrality guarantees and territorial concessions. While Moscow deemed the proposal incomplete, it acknowledged it as a starting point for discussions, keeping hopes for a diplomatic breakthrough alive.

In November, our strongest contributors were Healthcare and Food, with Healthcare surging 24.3% (contributing +66bps) and Food rising 12.1% (contributing +27bps). Healthcare benefitted from strong investor interest driven by the sector's stable earnings visibility and a wave of positive clinical updates. Food also posted solid returns, with its resilience attributed to improving margin outlooks as input cost inflation began to stabilize. On the other hand, Clean Energy faced a significant sell-off, plummeting 35.0%, dragging portfolio performance down by 150bps. This broad-based correction impacted players like Uranium stocks. Semiconductors also struggled, dropping 31.6%, as major companies like AMD and Nvidia experienced sharp valuation resets and increased competition from Google's proprietary AI chips (GTUs).

At the stock level, Alphabet was our top contributor, adding +65bps with a 13.9% rally. Investor sentiment was boosted after the company launched its new and promising AI software, Gemini 3, along with its GTUs. Reports of potential commercial deals with Meta further reassured investors that Google remains a strong player in the AI race. Harmony Biosciences also delivered strong returns, surging 23.5% (contribution of +57bps) after reporting earnings that beat analyst estimates and raising its full-year guidance. On the negative side, CATL was the largest detractor (contribution of -82bps), falling 15.6%. The decline was triggered by the expiration of a lock-up period on its Hong Kong shares, prompting investors to cash out after significant gains. This selling pressure was exacerbated by an arbitrage trade reversing the valuation premium the HK shares held over their onshore counterparts. We view this as a technical, short-term impact rather than a fundamental deterioration. AMD and Palo Alto Networks also weighed on performance, dropping 15.1% and 13.7%, respectively, contributing -63bps and -56bps, amidst the broader Tech sell-off.

Regarding portfolio activity, we executed a strategic shift within our Clean Transportation theme. We sold our positions in Li Auto and BYD to mitigate single-stock risk amidst increasingly intense competition in the Chinese EV market. To maintain exposure to this theme while diversifying away from idiosyncratic risks, we reinvested the proceeds into the KraneShares Electric Vehicles & Future Mobility ETF which maintains significant exposure to Chinese companies. Additionally, we initiated a position in SBI Holdings. We believe the Japanese financial group offers an attractive valuation and significant growth potential.

For the avoidance of doubt, if you decide to invest, you will be buying units/shares in the Fund and not investing directly in the underlying assets.

<b>Frontier markets:</b> Within emerging markets, those that are particularly small, new or under-developed.	<b>Correlation and annualised volatility:</b> Correlation shows how a fund's return moves in relation to the benchmark. Highly correlated investments tend to move up and down together while this is not true for investments with low correlation. Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.
<b>Emerging markets:</b> Markets of less economically developed nations, such as some nations in Asia, Africa, Eastern Europe and Latin America.	<b>Standard deviation:</b> Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.
<b>Bonds:</b> Securities that represent an obligation to repay a debt, with interest. Below investment-grade bonds generally pay higher interest rates but are considered less likely to make all scheduled payments.	<b>Maximum drawdown:</b> The largest loss measured from peak to trough until a new peak is attained.
<b>Convertible bonds:</b> Bonds that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.	<b>Ongoing charges (OCR):</b> Ongoing charges are based over 12 months of expenses ending the 31 December of the previous year. It is annually updated, but may be adjusted more frequently.
<b>Contingent convertible bonds (CoCos):</b> Convertible bonds that offer the potential for high interest and capital gains, in exchange for higher risk of loss.	<b>Sharpe ratio:</b> The Sharpe ratio shows the fund's risk-adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.
<b>Convertible debt securities:</b> Debt securities that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.	<b>Tracking error:</b> The volatility of the fund's excess returns over its benchmark returns. It quantifies how closely a manager's return pattern follows that of the benchmark.
<b>Asset-backed securities:</b> A type of debt security backed by receivables (such as credit card debt) and typically carrying above-average risk.	<b>Derivatives risk:</b> Certain derivatives could increase Sub-Fund volatility or expose the Sub-Fund to losses greater than the cost of the derivative.
<b>Debt securities:</b> Securities that represent an obligation to repay a debt, along with interest.	<b>Counterparty risk:</b> The Sub-Fund could lose money if an entity with which it does business becomes unwilling or unable to honor its commitments to the Sub-Fund.
<b>Equities:</b> Securities that represent a share in the business results of a company.	<b>Management risk:</b> Portfolio management techniques that have worked well in normal market conditions could prove ineffective or detrimental during unusual conditions.
<b>Derivatives:</b> Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.	<b>Credit risk:</b> Prices of a debt security may fall if the issuer's creditworthiness deteriorates, or if investors believe it may do so. This risk tends to be greater with lower quality debt securities. In extreme cases, an issuer's securities could become worthless if it fails to make timely debt service payments.
<b>Money market instruments:</b> Financial instruments designed to provide stable value, interest and a very low risk of loss, as well as being readily convertible into cash.	<b>Operational risk:</b> In any market, but especially in emerging markets, the fund could lose some or all of its money through a failure in asset safekeeping or through fraud, corruption, political actions or any other unexpected events.
<b>Option:</b> Financial instruments that offer the right to buy (call option) or sell (put option) shares at a certain price	<b>Liquidity risk:</b> Certain securities could become hard to value, or to sell at a desired time and price.
<b>Commodities:</b> A category that includes metals, building materials, fuels and food ingredients.	
<b>Alpha:</b> Alpha shows the percentage performance of a fund above or below that explained by its exposure to the broader market.	
<b>Beta:</b> Beta shows the average extent a fund's return moves relative to the broader market. A fund with a beta above 1 moves on average more than the market and below 1 moves on average less than the market.	
<b>Cut-off:</b> Deadline for remittance of orders to the transfer agent in Luxembourg as set out in the relevant annexes to the prospectus. You may be required to submit your orders to your financial advisor or fund distributor by an earlier cut-off time.
