

Weisskopf Funds UCITS – Balanced USD

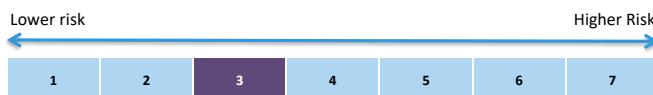

Marketing communication as of : 31.12.2025

Investment Universe and Investment Objectives

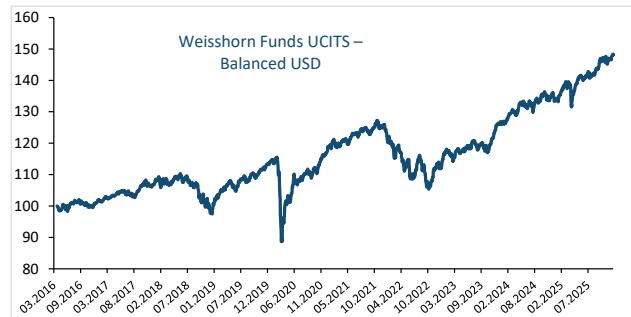

ISIN: LU1396255876

NAV 148.18

The investment objective of the Sub-Fund is to seek long-term capital growth and income by investing in equities, fixed/floating income instruments, money market instruments, cash equivalents, collective investment schemes pursuing traditional strategies and to a lesser extent alternative strategies UCITS eligible funds. Total equity exposure coming from direct investments or from UCITS with as main investment objective in their issue document to invest in equity will not exceed 50% of the net assets. The Sub-fund is actively managed. The Sub-Fund has no benchmark index and is not managed in reference to a benchmark index.

The Weisskopf Balanced fund is a long term mixed investment vehicle suitable for long term investors (5-year minimum holding horizon). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The essential risks of the investment fund lie in the possibility of depreciation of the securities in which the fund is invested. Other risks materially relevant to the PRIIP not included in the summary risk indicator: Liquidity risks, Counterparty risks, Operational risks, Risks from the use of derivatives. This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment.

The past performance is not an indicator of future returns. The return of the fund may go down as well as up due to changes in rates of exchange between currencies. Future performance is subject to taxation which depends on the personal situation of each investor and which may change in the future.

December closed the year on a positive note for financial markets. With the government shutdown now behind us, the publication of economic data resumed, leading to a dense flow of releases that drove markets in both directions over the month. Nevertheless, growing optimism surrounding the economic outlook for 2026 ultimately provided support to equity valuations. Against this backdrop, the S&P 500 ended the month up 0.06%. The STOXX Europe 600 gained 2.82% in December and delivered a strong annual performance of 20.65%. 10-year yields have risen on both sides of the Atlantic, accentuating the steepening of the yield curve. The Weisshorn Balanced USD fund gained 0.75% over the month and ended the year up 10.76%.

US macroeconomic data confirmed the continued resilience of the American economy. Third-quarter GDP figures, delayed due to the government shutdown and released on December 23rd, significantly exceeded expectations, with growth coming in at 4.3% versus a consensus forecast of 3.3%. In addition, inflation data surprised to the downside, coming in well below analysts' expectations. The combination of stronger-than-expected growth and easing inflation remains supportive for equity markets, provided this trajectory is sustained. At this stage, analysts broadly remain confident that the US economy is heading toward a normalization of growth alongside stable inflation dynamics in 2026.

Central Banks held their final meetings of the year. In Europe, the European Central Bank delivered no major surprises. President Lagarde indicated that the ECB has reached the end of its rate-cutting cycle, with policy rates expected to remain unchanged for the time being. In light of upward revisions to European growth expectations, some market participants are now beginning to price in the possibility of rate hikes in Europe in 2026. In the United States, the Federal Reserve implemented a widely anticipated 25-basis-point rate cut. The Fed struck a relatively neutral tone, highlighting upside risks to inflation and downside risks to employment an environment that continues to pose a delicate balancing act for monetary policy.

Corporate earnings remained robust on both sides of the Atlantic. In Europe, the financial sector continued to benefit from a steepening yield curve and a recovery in trading and investment banking activity. In the US, Technology and Communication Services once again led earnings growth, driven by sustained and substantial investments in artificial intelligence.

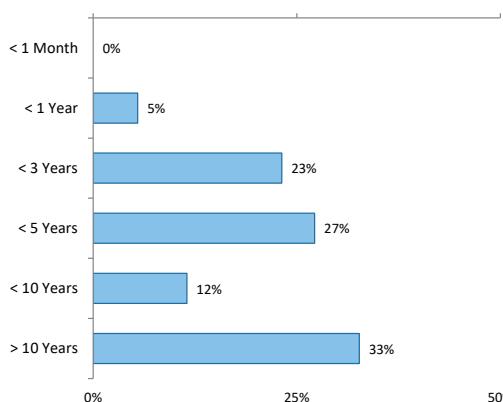

While Bonds had a slight negative contribution to performance (-14 basis points) due to a rise in long-term interest rates, it was mainly Equities (54 basis points) and Commodities (+20 basis points) that generated most of the month's performance.

Leonardo, which ended the year up 89.5%, contributed 13 basis points, while our allocations to Chinese and Swiss equities contributed 6 and 7 basis points, respectively. Our Equity Dividend themes were also a positive contributor. On the Commodities side, Copper (+13 basis points) stole the show from Gold (+6 basis points) for once. These two metals ended the year up 36.3% and 64.6% respectively.

Over the year as a whole, Equities contributed 60% of the fund performance, with an average allocation of around 40%. Bonds generated 150 basis points, while Commodities contributed 230 basis points.

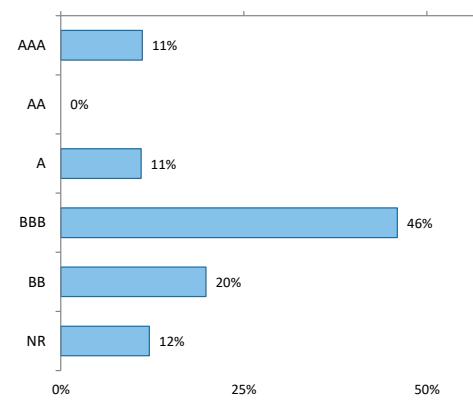

The economic environment at the start of the year is expected to be similar to that seen in the fourth quarter of 2025, with sustained growth and inflation under control. If this environment persists throughout the year, the context would be favorable for risky assets, which is why our allocation remains unchanged for the time being.

For the avoidance of doubt, if you decide to invest, you will be buying units/shares in the Fund and not investing directly in the underlying assets.

Key Term Definition

Frontier markets: Within emerging markets, those that are particularly small, new or under-developed.

Emerging markets: Markets of less economically developed nations, such as some nations in Asia, Africa, Eastern Europe and Latin America.

Bonds: Securities that represent an obligation to repay a debt, with interest. Below investment-grade bonds generally pay higher interest rates but are considered less likely to make all scheduled payments.

Convertible bonds: Bonds that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.

Contingent convertible bonds (CoCos): Convertible bonds that offer the potential for high interest and capital gains, in exchange for higher risk of loss.

Convertible debt securities: Debt securities that offer the holder the option of receiving the payment of principal in either cash or a certain number of shares.

Asset-backed securities: A type of debt security backed by receivables (such as credit card debt) and typically carrying above-average risk.

Debt securities: Securities that represent an obligation to repay a debt, along with interest.

Equities: Securities that represent a share in the business results of a company.

Derivatives: Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.

Money market instruments: Financial instruments designed to provide stable value, interest and a very low risk of loss, as well as being readily convertible into cash.

Option: Financial instruments that offer the right to buy (call option) or sell (put option) shares at a certain price

Commodities: A category that includes metals, building materials, fuels and food ingredients.

Alpha: Alpha shows the percentage performance of a fund above or below that explained by its exposure to the broader market.

Beta: Beta shows the average extent a fund's return moves relative to the broader market. A fund with a beta above 1 moves on average more than the market and below 1 moves on average less than the market.

Cut-off: Deadline for remittance of orders to the transfer agent in Luxembourg as set out in the relevant annexes to the prospectus. You may be required to submit your orders to your financial advisor or fund distributor by an earlier cut-off time.

Correlation and annualised volatility: Correlation shows how a fund's return moves in relation to the benchmark. Highly correlated investments tend to move up and down together while this is not true for investments with low correlation. Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.

Standard deviation: Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.

Maximum drawdown: The largest loss measured from peak to trough until a new peak is attained.

Ongoing charges (OCR): Ongoing charges are based over 12 months of expenses ending the 31 December of the previous year. It is annually updated, but may be adjusted more frequently.

Sharpe ratio: The Sharpe ratio shows the fund's risk-adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.

Tracking error: The volatility of the fund's excess returns over its benchmark returns. It quantifies how closely a manager's return pattern

Derivatives risk: Certain derivatives could increase Sub-Fund volatility or expose the Sub-Fund to losses greater than the cost of the derivative.

Counterparty risk: The Sub-Fund could lose money if an entity with which it does business becomes unwilling or unable to honor its commitments to the Sub-Fund.

Management risk: Portfolio management techniques that have worked well in normal market conditions could prove ineffective or detrimental during unusual conditions.

Credit risk: Prices of a debt security may fall if the issuer's creditworthiness deteriorates, or if investors believe it may do so. This risk tends to be greater with lower quality debt securities. In extreme cases, an issuer's securities could become worthless if it fails to make timely debt service payments.

Operational risk: In any market, but especially in emerging markets, the fund could lose some or all of its money through a failure in asset safekeeping or through fraud, corruption, political actions or any other unexpected events.

Liquidity risk: Certain securities could become hard to value, or to sell at a desired time and price.
